

Website Project Subject

NaijaEats: A food discovery and online ordering website for authentic Nigerian cuisine in Lagos.

Brief Description of the Planned Site Content

NaijaEats will provide users with information about top-rated restaurants and local food vendors in Lagos. The website will feature restaurant profiles, authentic Nigerian dishes with descriptions and images, an online ordering or reservation form, a weekly featured dish section, and contact and location information for each restaurant.

Reason I Chose This Subject

I chose this project because I enjoy Nigerian cuisine and want to promote local restaurants while making it easier for people to discover and order authentic meals online. This project will also allow me to apply the web development skills I am learning by creating an interactive and user-friendly website.
